

INSTRUCTIONS

General

Pages 2 and 3 are data summaries and require no input. Input data in shaded fields on Pages 4 through 7, all other fields are calculated. It is suggested you read the form and determine what plant specific data you must gather prior to completing the form. To properly complete this form you will need (as a minimum) to collect the following data:

- A). wastewater flow data from last year;
- B). laboratory results for the waste treatment facility;
- C). Amount of sludge from DAF (If any) and moisture content of sludge (If any)
- D). Amount of sludge from Biological Treatment (If any), TKN-N, NH₃-N, and NO₃-N content of sludge.
- E). Storm water monitoring results (if sampled);
- F). Amount of ammonia purchased last year;
- G). Amount of Chlorine used on site.

Mineral Acids

Mineral Acid such as Phosphoric Acid are otherwise used and have a threshold of 10,000 pounds. If these are discharged in wastewater and the pH of the wastewater is between 6 and 9, there is no discharge and the treatment system efficiency is 100%

Ammonia Volatilization Factors

The following factors are suggested for estimating the amount of NH₃-N volatilized during spray application of wastewater and sludge

1999 TRI Calculations
 Plant A
 Podunk, GA

TRI Reporting Applicability

Ammonia

| | | | |
|----------------|--------|-----|----------------|
| Manufactured | 18,227 | lbs | NOT REPORTABLE |
| Processed | 0 | lbs | NOT REPORTABLE |
| Otherwise Used | 7,000 | lbs | NOT REPORTABLE |

All ammonia in wastewater is considered coincidentally manufactured as a byproduct of the treatment of high protein wastewater. Ammonia used in refrigeration systems is considered otherwise used because it is not manufactured or processed on-site. No ammonia is processed on-site.

Nitrate Compounds

| | | | |
|----------------|---------|-----|----------------|
| Manufactured | 812,826 | lbs | REPORTABLE |
| Processed | 0 | lbs | NOT REPORTABLE |
| Otherwise Used | 0 | lbs | NOT REPORTABLE |

All nitrate compounds in wastewater are considered coincidentally manufactured as a byproduct of the treatment of high protein wastewater. Reporting thresholds based on nitrate compounds as NaNO₃.

Chlorine

| | | | |
|----------------|--------|-----|----------------|
| Manufactured | 0 | lbs | NOT REPORTABLE |
| Processed | 0 | lbs | NOT REPORTABLE |
| Otherwise Used | 40,800 | lbs | REPORTABLE |

Chlorine is used as a chemical additive to wastewater for disinfection and is thus considered as otherwise used since it is not manufactured or processed. Chlorine in water is not released since the compound is immediately reacted. Only the fugitive releases due to valve and fitting leaks or the changeout of chlorine gas cylinders.

1999 TRI Calculations
Plant A
Podunk, GA

TRI Releases

Ammonia

| | | |
|--------------------------------------|--------|--------|
| Air | 22,048 | pounds |
| One Time Catastrophic Release to air | 140 | pounds |
| Water - wastewater effluent | 316 | pounds |
| Water - stormwater effluent | 126 | pounds |
| % Storm Water | 39.9% | |
| Other | 800 | pounds |

Nitrate Compounds

| | | |
|-----------------------------|--------|--------|
| Air | 0 | pounds |
| Water - wastewater effluent | 79,491 | pounds |
| Water - stormwater effluent | 5,430 | pounds |
| % Storm Water | 6.8% | |
| Other | 755 | pounds |

Chlorine

| | | |
|-------------------------------|-----|--------|
| Air | 408 | pounds |
| One Time Catastrophic Release | 0 | pounds |
| Water | 0 | pounds |
| % Storm Water | NA | |
| Other | NA | pounds |

Other included sludges that are transferred off site or land applied on-site. If the material is disposed of on-site, additional computations must be made to determine the material applied to land and volatilized to the air.

1999 TRI Calculations
 Plant A
 Podunk, GA

Anhydrous ammonia used for refrigeration system

| | | |
|--|--------|--------|
| Total Amount of Ammonia Purchased During the Calendar Year | 12,000 | pounds |
| Total Amount of Ammonia Purchase used for New System Addition | 5,000 | pounds |
| If there were recorded releases, enter the amount reported in incident investigations. | 700 | pounds |
| Was a water spray used to capture ammonia from these leaks? (If yes, put "yes" in box) | x | |
| Percent of Ammonia Captured by Water Spray | 80.0% | |

If your facility has a value for the amount captured, use this value. Otherwise a value of 80% is suggested

Wastewater Data

Annual Wastewater Flow **312,500,000** gallons

System Inlet
 DAF Influent (If you do not have treatment before DAF, copy System Inlet on this line)
 DAF Effluent (If you don't have a DAF, enter same value as DAF inlet)
 Discharge or Land Application Holding (LAS) Pond

| TKN - N (mg/l) | NH3-N (mg/l) | NO3-N (mg/l) |
|----------------|--------------|--------------|
| 100 | 15 | 0 |
| 75 | 50 | 15 |
| 50 | 40 | 15 |
| 2 | 1 | 5 |

You must insert values for each entry. If you don't have data, the following are typical values.

System Inlet
 After DAF
 Discharge/LAS Holding Pond (No Biological)
 Discharge/LAS Holding Pond (Anaerobic Only)
 Discharge/LAS Holding Pond (Aerobic)
 These assume a 50% removal of TKN in DAF.
 If aerobic biological treatment, all TKN converted to NH3-N to NO3-N to N2.

| TKN - N (mg/l) | NH3-N (mg/l) | NO3-N (mg/l) |
|----------------|--------------|--------------|
| 100 | 15 | 0 |
| 50 | 15 | 0 |
| 50 | 15 | 0 |
| 0 | 50 | 0 |
| 3 | 1 | 5 |

1999 TRI Calculations
 Plant A
 Podunk, GA

Wastewater Threshold Computations

| | | | |
|---|---------|--------|------------------------------|
| Total TKN - N into biological system. | 130,313 | pounds | |
| Total nitrate manufactured between system inlet and biological inlet. | 39,094 | pounds | |
| Total NH3 - N coincidentally manufactured per year | 150,103 | pounds | |
| Total Aqueous Ammonia coincidentally manufactured per year | 182,268 | pounds | |
| Aqueous Ammonia Release Factor | 10.0% | | Per EPA Form R Reporting Gui |
| Total Aqueous Ammonia coincidentally manufactured for threshold | 18,227 | pounds | |
| Total NO3-N coincidentally manufactured per year | 133,250 | pounds | 6.071428571 |
| Total Nitrate Compounds coincidentally manufactured per year | 812,826 | pounds | Assume NaNO3 per EPA |

Dissolved Air Flotation

| | | | |
|---|------------|-----------------------------------|-----------------------------------|
| Do you have a dissolved air flotation (DAF) system? (Yes or No) | Yes | If NO, enter 0 in next two cells. | |
| How much DAF sludge do you generate per year? | 12,500,000 | pounds | |
| What is the moisture content of the sludge produced from this system? | 75.0% | | |
| Total DAF Sludge generated per year | 1,498,801 | gallons | |
| Ammonia Nitrogen contained in sludge | 375 | pounds | |
| Ammonia in Sludge | 455 | pounds | |
| Aqueous Ammonia Release Factor | 10.0% | | Per EPA Form R Reporting Guidance |
| Ammonia Nitrogen in Sludge for Threshold and Reporting | 46 | pounds | |

Sludge removed from DAF may be land applied or rendered on-site or transferred off-site for rendering, land application, or disposal.

1999 TRI Calculations
Plant A
Podunk, GA

Biological Treatment

| | | | |
|---|------------------|---------|---|
| How much biological sludge is wasted from the system each year? | 9,048,000 | gallons | |
| Aeration System | | | |
| Total Wastewater Into Aeration System | 311,001,199 | gallons | |
| Total TKN into Aeration System | 129,688 | pounds | |
| Percent Volatilized | 10.0% | | Unless you have another value, 10% is suggested |
| Total Nitrogen Volatilized and Released | 12,969 | pounds | |
| Total Anhydrous Ammonia Released to Air | 15,748 | pounds | |
| Sludge Removed from Biological System | | | |
| Amount of Sludge Removed | 75,460,320 | pounds | |
| TKN Content of Sludge | 250 | mg/l | 250 mg/l is suggested, unless other data available |
| TKN Content of Sludge | 18,865 | pounds | |
| NH3-N Content of Sludge | 10 | mg/l | 10 mg/l is suggested, unless other data available |
| NH3-N Content of Sludge | 755 | pounds | |
| Aqueous Ammonia Content of Sludge | 916 | pounds | |
| NO3-N Content of Sludge | 10 | mg/l | 10 mg/l is suggested, unless other data available |
| NO3-N Content of Sludge | 755 | pounds | |
| Nitrate | 4,603 | pounds | |
| TON-N Content of Sludge | 18,110 | pounds | |

Sludge removed from biological wastewater treatment systems may be land applied on-site or transferred off-site for treatment or disposal.

1999 TRI Calculations

 Podunk, GA

Wastewater Releases

| | | |
|---|--------|-----------------------------------|
| NH3-N in wastewater effluent | 2,606 | pounds |
| Aqueous Ammonia in wastewater effluent | 3,165 | pounds |
| Aqueous Ammonia Release Factor | 10.0% | Per EPA Form R Reporting Guidance |
| Aqueous Ammonia released in wastewater effluent | 316 | pounds |
| NO3-N in wastewater effluent | 13,031 | pounds |
| Nitrate Compounds in wastewater effluent | 79,491 | pounds |
| TKN-N in wastewater effluent | 5,213 | pounds |
| TON-N in wastewater effluent | 2,606 | pounds |

Storm Water

This
 computati

The Form R guidance indicates that you should complete the percent storm water block only if you have a discharge to a receiving stream.
 The Form R guidance indicates that you should put "NA" in the percent storm water block if you have no monitoring data.

| | | |
|---|-------|--|
| Do you have NH3-N data for storm water? (Yes or No) | Yes | |
| Do you have NO3-N data for storm water? (Yes or No) | Yes | |
| Total Plant Area of industrial operations | 58 | Acre |
| Area Impervious (paved or building) | 14 | Acre |
| Area Pervious | 44 | Acre |
| Impervious Runoff Coefficient | 0.70 | EPA Form R Guidance |
| Pervious Runoff Coefficient | 0.35 | EPA Form R Guidance |
| Annual Rainfall | 52 | inches |
| NH3-N in storm water | 3.5 | mg/l |
| NH3-N in storm water | 1,039 | pounds |
| Aqueous Ammonia in storm water | 1,261 | pounds |
| Aqueous Ammonia Release Factor | 10.0% | Per EPA Form R Per EPA Form R Reporting Guidance |
| Aqueous Ammonia released in stormwater effluent | 126 | pounds |
| NO3-N in storm water | 3 | mg/l |
| NO3-N in storm water | 890 | pounds |
| Nitrate Compounds in storm water | 5,430 | pounds |

Chlorine
